

PWMS Introductory Lesson Plan

Parliamentary Workflow Management System — introducing the IRPD section to its workflows

Lesson	An introduction to PWMS for the IRPD section
Audience	IRPD section staff who will create, monitor and report on Delegation Reports, International Resolutions and International Agreements
Group size	6–12 (one trainer; a second pair of hands helps at 10+)
Duration	90 minutes, single session (a 45-minute short form is offered in §3)
Mode	Instructor-led, in person, with a live system and hands-on practice
Prerequisite	An activated PWMS account, active membership of the section's group, and basic browser skills
Takeaway	The Training Manual and the Quick Reference Card
Version	1.0 (aligned with PWMS 0.1.0)

This is the induction, not the course. It gives the section a working mental model of PWMS and the confidence to open it on Monday. The [Training Manual](#) is the reference course behind it — fourteen modules, an assessment and a full set of exercises — and is what participants are asked to read afterwards.

1. Why this lesson

The section already does this work. What changes is where it lives: instead of spreadsheets, shared drives and email threads, each instrument becomes a single record in PWMS that shows where it stands, who may act on it next, what documents belong to it, and what has happened to it so far.

The purpose, in the terms used at the start of the session:

The purpose of PWMS is to give Parliament one trustworthy, shared place to manage its legislative work, in place of scattered spreadsheets, shared drives and email chains where items can be forgotten, duplicated, or quietly changed without anyone noticing. It exists to make the progress of every instrument clear and visible to the people who need it, to make sure that only the right people are able to act at the right stage, and to leave a complete and reliable record of how each decision was reached. In short, PWMS is there to make parliamentary workflow more transparent, more accountable and less prone to error — so that nothing falls through the cracks and everyone involved can see exactly where things stand.

What success looks like at the end of 90 minutes. Every participant can sign in, find the records they owe action on, read a record's stage and history, create a delegation report, move a record forward — including recording the ATC publication that allows a report to be closed — and find a document, a note, a referral and a report. Nobody needs to remember a reference number or a field name; they need to know where to look.

What this lesson deliberately does not do. It does not cover the administrator side (workflow definitions, roles, memberships), the API, or the fine detail of every field. Those belong to the Training Manual and to the section's own house rules.

2. Objectives and outcomes

2.1 Learning objectives

By the end of the lesson the section will be able to use PWMS as the authoritative record of its international engagement work.

#	Objective
01	Understand what PWMS is for, and what it replaces
02	Recognise the three IRPD instruments and how each one moves through its stages
03	Find their own work and read where any record stands
04	Capture and progress an IRPD record correctly, including the ATC publication

#	Objective
05	Know where to look for help, and what the section must agree among itself

2.2 Learning outcomes

Outcomes are written so the trainer can observe them. Each is demonstrated live, and confirmed again by the exit ticket in §8.

#	By the end of the lesson, each participant can...	Demonstrated by	Checked by
LO1	State, in one sentence each, what PWMS replaces and why the section is using it	Discussion in §6.1	Exit ticket Q1
LO2	Name the three instruments and give the stage sequence of one, including its final stage	Discussion in §6.2	Exit ticket Q2
LO3	Sign in and use the dashboard's four work lists to say what they owe action on	Task A in §7	Exit ticket Q3
LO4	Open a record and read its stage, its progress and its history without help	Task A in §7	Exit ticket Q3
LO5	Create a delegation report, including its engagement dates, delegates and a resolution	Task B in §7	Exit ticket Q4
LO6	Move a record forward from the Status menu, and record the ATC publication that unblocks closing a report	Task B in §7	Exit ticket Q5
LO7	Raise a referral, and say what a referral does and does not grant a committee	Demonstration in §6.7	Exit ticket Q6
LO8	Attach, open and detach a document, and add a note	Demonstration in §6.8	Exit ticket Q7
LO9	Build a filtered report and export it	Demonstration in §6.9	Exit ticket Q8
LO10	Say where to get help, and name the two things the section must agree itself	§6.10	Exit ticket Q9

3. Session at a glance

Ninety minutes, ten segments. Timings assume a single trainer and a live system.

Time	Mins	Segment	Who is active
0:00	7	1. Welcome, purpose and outcomes	Trainer talks; section answers one question
0:07	11	2. The big picture — three instruments, stages, who may act	Trainer talks with a diagram; section reads a lifecycle
0:18	14	3. Getting around — sign in, dashboard, registers, a record's anatomy	Trainer demos; section follows on screen
0:32	8	4. Task A — find your work, read a record	Section works , trainer circulates
0:40	13	5. Capture — creating a delegation report	Trainer demos, then section starts one
0:53	13	6. Progress — moving on, and the ATC publication	Trainer demos the blocked-then-unblocked close; section completes Task B
1:06	6	7. Committees — referrals	Trainer demos; section answers one question
1:12	6	8. Documents and notes	Trainer demos; section answers one question
1:18	6	9. Reporting and alerts	Trainer demos a report and an export
1:24	6	10. Wrap — help, house rules, exit ticket	Section completes the exit ticket

Short form (45 minutes). Run segments **1, 2, 3, 6 and 10** only: the reason, the model, the tour, the ATC close, and the wrap. Hand out the [Quick Reference Card](#) and set the [Training Manual](#) as the follow-up, then arrange the hands-on tasks as a supervised clinic in the following week.

Two half-sessions instead of one. Break after segment 4 (45 + 45): the first half is orientation and reading the system, the second is capture, progress and practice. This suits a section that cannot all leave the desk at once.

4. Before the session

The lesson fails unhelpfully if the environment is not ready, so confirm these the day before. Items marked **admin** need the PWMS administrator; the rest are the trainer's own preparation.

4.1 Accounts and access

#	Item	Why it matters
1	admin — every participant can sign in	The whole session depends on it
2	admin — each participant is an active member of the section's group (IRP: MR: Man And Gen)	Group ownership is what gives the section view, edit and move-on rights on its own records
3	admin — the roles allowed to create each of the three types are configured, and the participants hold one	Until this is set, New Report , New Resolution and New Agreement refuse a normal user with “ <i>You do not have a role that may create delegation reports.</i> ” This is the first thing that will break in front of the section
4	admin — SharePoint sites are enabled and memberships synced for the participants	The document picker lists only the sites a user belongs to; an unsynced account shows an empty tree
5	admin — a training record is prepared (see 4.2)	The ATC demonstration needs a record in exactly the right shape

4.2 The training records to prepare

Use a sandbox or a clearly marked training record; never run the class against a live instrument.

#	Record	State it must be in	Used for
T1	A delegation report	<i>Tabled and referred to Committee</i> , with no ATC update recorded	Segment 6: the close is blocked , then unblocked once the ATC publication is recorded. This is the high point of the lesson — set it up carefully
T2	A delegation report	<i>Awaiting PGIR approval</i> , with two delegates and one resolution	Segments 3 and 4: reading a record's anatomy, its resolutions, participants and history
T3	An international resolution	<i>Captured</i>	Segments 2 and 5: the shorter lifecycle
T4	An international agreement	The starting stage	Segment 2: note that it starts part-way along, not at the top
T5	A record with a document attached and an open referral	whichever stage	Segments 7 and 8: something to look at rather than create

4.3 Rehearse the ATC sequence once

Segment 6 depends on a sequence that must work first time. Walk it end to end on T1 before the session:

1. Open T1 → **Status** → **Close – House approved**. The confirmation page shows **This transition cannot be taken yet** with “*Requires a ‘ATC update published’ event on this workflow.*”
2. Leave the confirmation page without applying it.
3. On the record's **Overview** tab, find the **BR03 updates** card and select **Add update**. Enter a date and any one ATC detail (reference, publication date, page or document link) → **Record update**.
4. Confirm PWMS answers with “*ATC update published recorded. The report may now be closed from the Status menu.*”
5. **Status** → **Close – House approved** → **Confirm status change**, and confirm the record lands on its **Timeline** with the move recorded.

Then **undo it** so the class can see the blocked state for themselves: either use T1's copy, or clear the update afterwards through the administrator.

4.4 Trainer's own rehearsal list

- Sign in as a **participant-like account** once (not as a superuser). A superuser sees buttons and options that the section will not, which makes for a confusing demonstration.
- Have the three registers and one record's tabs open in advance, so no segment begins with hunting.
- Know where the section's SharePoint documents live, so the document segment does not stall on browsing.

5. Materials and handouts

Item	Notes
Projector / large screen, and a second screen or printout for the trainer	The trainer should be able to see the click-path notes while the room sees the system
A browser with the participant-like account signed in	See 4.4
The training records in §4.2	
Quick Reference Card — printed A4, one per participant	The wall card; the section's daily companion
Training Manual — handed out as a PDF or link	The reference course
Printed task sheet (§7)	One per participant; three tasks with success criteria
Printed exit ticket (§8)	One per participant
The delegation-report lifecycle from §6.2 — printed or on a slide	The single picture participants will remember

6. Running order

Each segment gives the trainer: **what to say**, **what to show**, and **what to ask**. Labels in code are field names; labels in **bold** are buttons, menus or tabs exactly as they appear on screen.

6.1 Segment 1 — Welcome, purpose and outcomes (7 min)

Say what the session is and is not: *we are not going through every field today; we are going to leave knowing what PWMS is for, how our three instruments move, and how to find and progress our own work.*

Read the purpose statement from §1 aloud, then tie it to the section's own experience: an item chased twice by email; a report whose stage nobody could state with certainty; a resolution that stalled after adoption because ownership of its implementation was never written down.

State the outcomes in one sentence each (O1–O5 in §2.1) and say that the exit ticket at the end is not a test of them, but a way for the trainer to see what needs a follow-up session.

Ask: *"In one sentence — what would you like PWMS to stop you having to do?"* Take three answers, write them up, and return to them in the wrap. It gives the section ownership of the session and tells you where the resistance is.

6.2 Segment 2 — The big picture (11 min)

Three ideas, no clicking yet.

One: three instruments, one system. IRPD's work in PWMS is **Delegation Reports**, **International Resolutions** and **International Agreements** — plus the section's own organisational group, which holds the roles and people. Everything else in PWMS (referrals, documents, notes, alerts, reports) is attached to those records.

Two: every record sits at a stage, and only certain moves are allowed. A record has a **stage** (where it is), a **public status** (the simplified version the outside world sees) and a **transition** (a permitted move to the next stage). Only the moves legal from the current stage are ever offered, and each move is recorded against the person who took it.

Show the lifecycle of the section's primary instrument — the delegation report — and note that it is the one with a precondition on its final move:

flowchart TD

```
A(["Awaiting PGIR approval"]) →|"Submit for tabling"| B["Submitted for tabling"]
B →|"Table and refer to Committee"| C["Tabled and referred to Committee"]
C →|"Close – House approved – needs the ATC update first"| D(["Closed – House approved"])
```

Then give the other two, briefly:

- **International Resolution** — *Captured → Assigned → In Progress → Implemented → Closed*. Resolutions are adopted at an engagement and belong to the report they came out of.
- **International Agreement** — starts at *Agreement Tabled – referred to Committee* and runs through committee consideration and House adoption to *Closed – House approved*. It does **not** start at the first stage printed on the

diagram, because a captured agreement has normally already been tabled.

Three: who may act. The section — as the group that owns these three types — may view, edit and move its own records. Two people named on a record are treated specially: its **owner** may always view, edit and delete it, and the person it is **assigned to** may always view it. Everyone else sees a record only if it is referred to them or access is granted.

Ask: “Which of the three instruments contains the other two?” (A delegation report contains its international resolutions.) “Does reading a report let you change the resolutions inside it?” (No — reading a report gives you view of its resolutions, nothing more.)

Trainer tip. Do not demo the Current state dropdown on the edit form. It changes a record’s stage without taking a transition, checks nothing and records no history — it is an administrator’s correction tool. Mention it only if asked, and discourage it.

6.3 Getting around (14 min)

Demonstrate on the participant-like account; participants follow on their own screens.

1. **Sign in.** Your normal Parliament directory account; no separate PWMS password. Point out the **show/hide** control beside the password box.
2. **The dashboard.** Read the four figures and the four work lists out loud, and say what each is for:

On the dashboard	What it is telling you
Total workflows	Everything you can see, with open and unassigned counts beneath
Assigned to you	What you owe the next action on
Due in 7 days	Deadlines in the next week that have not yet passed
Overdue	Deadline passed while the record is still open
Assigned to you / Due soon / Overdue / Awaiting your committees	The four work lists; the last one is the committees that owe you an answer

Say plainly: *the dashboard is the section’s work list. If you look at nothing else each morning, look at this.*

3. **The registers. Workflows** opens the cross-instrument list, with filters for type, status and priority. The three instrument registers are narrower, each with a single search box. Show the **New Report** button but do not press it yet.
4. **A record’s anatomy.** Open T2 and walk the tabs in order, saying what each is for: **Overview** (what it is, who owns it, its facts, and for a report its BR03 updates) · **Progress** (how far along, and the journey so far) · **Related** (on a report: the resolutions captured at the engagement, and the delegates; on the other instruments: the parent and attached records) · **Notes** · **Attachments** · **Referrals** · **Diagram** · **Timeline**.
5. **The toolbar.** Point out **Document** (the record as a formal PDF or web page), **Status** (the moves available now), **Edit** and **Delete** — and say that each of these appears only if you are allowed to use it, so a missing button is nearly always a permission rather than a fault.
6. **The Timeline.** This is the answer to “when did that happen, and who did it?” Show it once and say that nothing on a record is ever quietly changed.

Ask: “Where would you go to find out what you owe action on today?” (Assigned to you.) “And to find out who moved a report last Tuesday?” (That record’s **Timeline**.)

Two practical tips to give here, because trainees will otherwise waste time: the search box in the page header is decorative and does nothing — use the **Search** on the page you are in; and the lists are not paged, so narrow them with search rather than scrolling.

6.4 Task A — find your work, read a record (8 min)

Participants work on their own screens. Success criteria are on the task sheet.

- Sign in, and from the dashboard say out loud which work list you would start with and why.
- Open the **Delegation Reports** register and find T2 by typing part of its reference into **Search**.
- Open T2 and answer three questions: what stage is it at; who owns it; what was the last thing that happened to it.

- Switch to the **Progress** tab and read how many steps remain to the final stage.

Trainer circulates. Watch for anyone who cannot find a record — that is almost always an access question, not a skill question, and it is worth noting for the administrator.

6.5 Capture — creating a delegation report (13 min)

Demonstrate once on screen, then let participants start their own.

1. **Workflows** → **Delegation Reports** → **New Report**.
2. Fill the **Workflow** section: Title (required), Description, Deadline — say that the deadline is what drives the dashboard's *Due soon* and *Overdue* figures, so it is worth setting even when it feels optional — and **Priority**. Mention that **Owner** is not on the form: whoever creates the record becomes its owner, and **Workflow** type is fixed to *Delegation Report*.
3. Fill the **Engagement details** section, and pause on the date rules: **an engagement date may never be in the future**, and the end date may not precede the start date. (This is why a record for an engagement still to come is created with the dates blank and filled in afterwards.)
4. Add a delegate under **Delegates**: search for the person, choose the **Type** (*Parliamentary Delegation Member* or *Support Official*), give the **Delegation role** they held, then **Add Delegate**.
5. Add a resolution under **Resolutions adopted**: number, title, adoption date, then **Add Resolution**. Say that this creates a real international resolution and links it to this report, so the section does not capture the same thing twice — and that it can also be done later from the report's **Related** tab, where the **Resolutions adopted** card lists them and carries its own **Add Resolution** form.
6. **Create report**. Read the confirmation aloud: *"Delegation report "DR-..." created."* Point out the reference number PWMS generated.

Ask: *"Who types the reference number?"* (Nobody — PWMS issues DR-⟨year⟩-⟨sequence⟩ on first save, restarting each January. Resolutions are the exception: you type that number, so the section must agree its own numbering.)

Participants now begin their own report and aim to reach the confirmation message.

6.6 Progress — moving on, and the ATC publication (13 min)

The centrepiece of the lesson. Demonstrate the **blocked** close first, so the requirement is felt rather than described.

1. Open T1 (the report in *Tabled and referred to Committee*) and look at the **Status** menu. Say what it is: only the moves legal from this stage, and each one opens a confirmation page.
2. Choose **Close – House approved**. The confirmation page refuses: **This transition cannot be taken yet**, and beneath it *"Requires a 'ATC update published' event on this workflow."* Read it out.
3. Explain why: the rule is that a report is not closed until its update has actually appeared in the Announcements, Tablings and Committee Reports. The system will not let the section assert a publication that has not been recorded. Point out that this is the one precondition the section will meet in practice.
4. Say where it is recorded, then show it: back on the record's **Overview** tab, the **BR03 updates** card, **Add update**. Give the update's date, then enter **any one** ATC detail — the reference, the publication date, the page number, or the document link — and select **Record update**.
5. Read the reply: *"ATC update published recorded. The report may now be closed from the Status menu."*
6. **Status** → **Close – House approved** → **Confirm status change**. Point out that the confirmation page now records a **Comment** — optional here, but the section should make it a habit, because the comment lands on the record's history — and that PWMS then lands the reader on the **Timeline** so the move can be seen alongside everything else.
7. Show the **Progress** tab one last time: the record is complete, and the journey shows who moved it, when, and with what comment.

Ask: *"What if you record an update without any ATC detail?"* (It is kept as part of the report's update history, but it publishes nothing, so the close stays blocked — PWMS tells you exactly that.)

Also say, briefly: a move is not the same as an edit. Moving a record on is a right of its own, and the section — as the group that owns these instruments — has it. A committee the record is referred to may read and edit it, but cannot move it on. That is deliberate: the *Status* menu offers every move out of the current stage, so lending it to a committee would let that committee

close a record it was only asked to advise on.

Participants complete **Task B**: record an ATC update on their own record and take one transition, then find the move on the **Timeline**.

6.7 Committees — referrals (6 min)

1. Open T5 and its **Referrals** tab. Raise one: **Add Referral**, Refer to a committee, set Response due — say that setting it is what drives the reminders — add a note saying what the committee should consider, then **Send referral**.
2. Show an open referral's row and its **Respond** and **Withdraw** actions. Say who may answer (the referred committee) and who may withdraw (whoever raised it).
3. Explain what a referral actually does, because this surprises people: it not only tells the committee, it **grants them access** — view, plus edit while the referral is open — and leaves them view afterwards, so they can still see what they were asked about. It does **not** let them move the record on.

Ask: "A committee answers our referral. Can they now close the record?" (No.)

6.8 Documents and notes (6 min)

1. **Attachments** tab → **Add attachment**. Browse *Sites you are a member of*, then either **Attach** an existing document or upload a new one with an **Attachment type** and **Upload & attach**. Say the important thing: **the file stays in SharePoint** — PWMS holds the link.
2. Open a document (a new tab) and show **Versions**. Explain that re-uploading a file of the same name into the same folder becomes a new version rather than a second document, and that **detach** removes only the link.
3. Say the one thing that trips people up: the address behind an open document expires within the hour, so **never copy it into an email** — send the record, and the reader opens the document from there.
4. **Notes** tab. Add a note. Then draw the distinction that confuses everyone at first: the record's **Notes field** (free text captured on the form, shown as *Notes on the record*) is **not** the **note log** — and a note may be changed or deleted **only by its author**.

Ask: "A colleague wants to correct a note you wrote. What should they do?" (Add their own correcting note — the log is a record of what each person wrote.)

6.9 Reporting and alerts (6 min)

1. **Reports** → **Report builder**. Set a filter or two (workflow type, period, overdue only) and say the single most important sentence on the page: **a report can only ever contain records you could open yourself** — the same is true of its exports and of any link you share from it.
2. Show the summary figures, then **Export** and name the four formats. Warn about the trap: the **Report** selector changes what you see on screen, but **every export carries the summary, the breakdowns, the register, the activity and the referrals; CSV is the register only**.
3. Show **Share**: a link, an expiry, and an optional repeat. Say that the recipient must sign in, that they see the *creator's* figures, that a share cannot be edited afterwards, and that only an administrator can revoke it.
4. Finally, the bell. Open it, then **View all alerts**. Say that opening an alert marks it read but *viewing the page marks nothing*, and that **Mark all read** clears everything. Then the caution: alert email depends on the mail service and a background worker being configured, so if email is not arriving, the bell is still telling the truth — check with the administrator rather than re-recording anything.

6.10 Wrap — help, house rules and the exit ticket (6 min)

1. Return to the answers the section gave in segment 1 and say honestly which of them PWMS already handles and which are still the section's own discipline.
2. **Where to get help**. For access: the PWMS administrator. For how the section works: the [Training Manual](#), and the [Quick Reference Card](#) on the wall.
3. **Two things the section must agree itself**, because PWMS will not decide them:
 - **How resolutions are numbered**. The number is typed by you and only checked for uniqueness, so the section needs one house style.
 - **What a transition comment should contain**. Comments are optional in PWMS, so make it a rule that every move

records the minute or correspondence behind it.

4. Hand out and collect the **exit ticket** (\$8). Say what happens next: the administrator acts on any access problem found today, and the Training Manual is circulated for the section to work through, with the exercises in its Appendix F run as a supervised clinic.

7. Task sheet

Hand one to each participant. Success criteria are what the trainer looks for while circulating.

Task A — Find your work and read a record

Step	Success criterion
1. Sign in and open the dashboard	You can name the figure that tells you what you owe action on
2. Find the training report by searching the Delegation Reports register	The register shows the one matching row and a count
3. Open the record and use the tabs	You can state its stage, its owner, and the last thing that happened to it
4. Open Progress	You can say how many steps remain to the final stage

Task B — Capture and progress a record

Step	Success criterion
1. New Report and complete the Workflow section	Title and Priority set; Deadline set
2. Complete the Engagement details section	Dates are not in the future and the end date is not before the start
3. Add one delegate, and one resolution — on the form or afterwards from the report's Related tab	Both appear in the report; the resolution is linked to it
4. Create report	PWMS confirms and issues a DR—... reference
5. On the Overview tab, record an Add update carrying one ATC detail	PWMS confirms the ATC update was recorded
6. Take a transition from the Status menu, with a comment	The move appears on the Timeline , with your name against it

Task C — (optional, if the room is quick)

Find the record with an open referral, answer a question about who owes the response, and open one of its attached documents without copying the address anywhere.

8. Exit ticket

Nine questions, five minutes, no marks — it tells the trainer what to follow up. Collect the sheets before anyone leaves.

1. In one sentence, what does PWMS replace for this section?
2. Name the three instruments IRPD works with, and say which one contains another.
3. Which dashboard list shows what you owe action on, and where do you read a record's full history?
4. Who types a delegation report's reference number?
5. What must be recorded before a delegation report can be closed, and where do you record it?
6. What does a committee get when we refer a record to it — and what does it not get?
7. (a) Where does an attached document actually live? (b) Whose note may you edit?
8. How many export formats does a report offer, and which one carries the register only?
9. Name one thing the section still has to decide for itself.

Answers

1. Scattered spreadsheets, shared drives and email threads — one shared, auditable place for the section's instruments.
2. **Delegation Report, International Resolution, International Agreement**; a delegation report contains its international

resolutions.

3. **Assigned to you** (with **Due soon**, **Overdue** and **Awaiting your committees** beside it) for the workload; the **Timeline** tab for a record's history.
4. Nobody — PWMS issues it (DR-<year>-<sequence>), restarting each January. (A resolution's number is the exception: that one you type.)
5. An **ATC update published** entry, recorded on the report's **Overview** tab under **BR03 updates** → **Add update**, giving at least one ATC detail.
6. It gets **view**, plus **edit while the referral is open**, and keeps view after it closes. It does **not** get the right to move the record on.
7. (a) In **SharePoint** — PWMS holds a link, and detaching removes only that link. (b) Only **your own** notes.
8. Four — **Excel (.xlsx)**, **PDF (.pdf)**, **Web page (.html)** and **Comma-separated (.csv)**; **CSV** carries the register only.
9. Any of: how resolutions are numbered; what a transition comment should contain; who may create each type of record (with the administrator).

9. Contingencies

If...	Then...
A participant cannot sign in	Take it offline with the administrator; pair them with a neighbour so they still follow the session, and fix it the same day
A participant cannot create a record	This is the \$4.1 access configuration. Let them work on another participant's record for Task B, and note it — it is the most common first-day problem
The document picker is empty	The SharePoint site is not enabled or the membership is not synced. Fall back to T5's already-attached document and cover \$6.8 from that
The ATC demonstration does not unblock the close	Do not improvise a workaround in front of the room. Say that this is the one thing the section must get right, take the question away, and have the administrator confirm afterwards. (The likely cause is a typo in the date or an update saved with every ATC field left blank.)
The room is slower than planned	Drop segment 9 to a demonstration only, and give the report builder as reading. Never drop segment 6
The room is faster	Run Task C, then have participants each find one record that is Overdue and explain to a neighbour what should happen to it next
The live system is unavailable	Run the session from the printed lifecycle diagram and the wall card, and rebook the hands-on half. The model in segment 2 survives without the system
Someone is anxious about "getting it wrong"	Say plainly: the system is built so the wrong move is usually not offered, nothing is quietly changed, and every action is recorded against a name rather than hidden

10. Where to go next

For	Read
The full course, with exercises and an assessment	Training Manual
A one-page reminder for the desk or wall	Quick Reference Card
The plain-language description of what PWMS is and why	User Manual Introduction
Any term you heard today and did not recognise	Glossary, Appendix C of the Training Manual

A suggested follow-up for the section leader. Ask each participant to bring one real piece of work to a follow-up clinic two weeks later and complete it in PWMS end to end, with the trainer present. Nothing consolidates this lesson faster than doing one genuine record while someone is on hand to answer the question they thought was too small to ask.

Appendix A — Slide outline

One line per slide. The lesson needs no more than this.

#	Slide	Segment
1	Welcome — introducing PWMS to IRPD	6.1
2	Why: what PWMS replaces, and the purpose statement	6.1
3	What you will be able to do by the end (objectives O1–O5)	6.1
4	Three instruments, one system	6.2
5	The lifecycle of a delegation report (with the ATC precondition marked)	6.2
6	Resolution and agreement lifecycles, side by side	6.2
7	Stage, public status, transition — and who may act	6.2
8	Signing in, and the dashboard's four figures	6.3
9	The four work lists	6.3
10	The registers, and how to search them	6.3
11	A record's tabs, one line each	6.3
12	The toolbar: Document, Status, Edit, Delete — and why a button is missing	6.3
13	Capture: the delegation report form	6.5
14	The date rules, and the reference number PWMS issues	6.5
15	Moving a record on: the Status menu and the confirmation page	6.6
16	Blocked: the ATC requirement, and where it is recorded	6.6
17	Referrals: what a committee gets, and what it does not	6.7
18	Documents live in SharePoint; notes belong to their author	6.8
19	Reporting: only what you can open, and the four export formats	6.9
20	Alerts: the bell, and why email needs the administrator	6.9
21	Where to get help; the two things we must agree ourselves	6.10

Appendix B — The terms to use, and to avoid

Trainers should use the screen's language, because participants will meet the screen again alone. These are the words that matter, in plain terms.

Say this	Not this	Why
stage	state, status code	The system says <i>Current state</i> , but the screen also shows a public status ; keeping "stage" for the internal one stops the two blurring
move it on	transition it, advance the workflow	<i>Transition</i> is the model's word, not the user's
the section's records	our workflow instances	Everyone's instinct is "records"
referral	task, assignment	A referral is a specific, dated request to a committee, and it grants access
the update's ATC details	the atc fields	Name what the person is typing, not the database column
BR03 updates	the updates table	Match the card's own heading so it can be found again

Also use **record** rather than **instrument** in speech, but keep **instrument** for the slide titles, since the documentation uses it and the distinction between the three kinds matters.
