

PWMS — IRPD Quick Reference

Parliamentary Workflow Management System · Delegation Reports · International Resolutions · International Agreements

Sign in & your day

- Sign in with your **Parliament directory account** — no separate PWMS password. Use the show/hide control to check your typing.
- Dashboard figures: **Total workflows** (open · unassigned) · **Assigned to you** (you owe the next action) · **Due in 7 days** · **Overdue**.
- Work lists: **Assigned to you** · **Due soon** · **Overdue** · **Awaiting your committees**.
- Overdue** = deadline passed while the record is still open. A record in a final stage is never overdue.
- The **bell** shows alerts. The search box in the page header is decorative — use the **Search** on the page you are working in.

The three lifecycles

Delegation Report

Awaiting PGIR approval → Submitted for tabling → Tabled and referred to Committee → **Closed – House approved**
DR-YYYY-NNNN (issued by PWMS)

International Resolution

Captured → Assigned → In Progress → Implemented → **Closed**
number is typed by you and must be unique

International Agreement

(Submitted for tabling) → **Agreement Tabled – referred to Committee** [start] → Committee considering and processing → Committee submitted report for tabling → House adopted → referred to Department → **Closed – House approved**
IA-YYYY-NNNN (issued by PWMS)

A new agreement starts at stage 2, not at *Submitted for tabling*. Reference numbers restart at 0001 each January — always quote the year.

Create a record

- Common to all three*: **Title** (required), Description, Assigned to, **Deadline**, Priority.
- Delegation Report** (*New Report*): engagement name, country → city, start/end dates (**never future; end ≥ start**), report document link, delegates (member or support official + role held), resolutions adopted.
- International Resolution** (*New Resolution*): **resolution number** (required, unique), delegation report (optional), adoption date, responsible group, resolution text, implementation progress.
- International Agreement** (*New Agreement*): agreement type 231(2)/231(3), ATC tabling date, submitting department, responsible minister, referral committees, ATC reference, agreement + memorandum links.

Minister: link a **serving** office holder in *Responsible minister*. For a former minister or one with no account, type the name in *Responsible minister name* — PWMS refuses anyone holding no executive appointment.

Move a record on

- Toolbar: **Document** (PDF/HTML) · **Status** · **Edit** · **Delete** — each appears only if you may use it.
- Status** lists only the moves legal from the current stage. Each opens **Change status**: add a **Comment** (good practice — it lands on the Timeline), then **Confirm status change**. You land on the **Timeline**.
- Taking a move validates it, advances the stage, writes the history entry, and **alerts** the people who need to know.
- No **Status** menu = you may read or edit the record but **not move it on** (the usual case for a committee it was referred to).

Blocked? A warning — *This transition cannot be taken yet* — lists every unmet requirement and disables the button. **Closing a delegation report** needs an **ATC update published** entry, or PWMS answers “Requires a ‘ATC update published’ event on this workflow.” Record it yourself: **Overview** tab → **BR03 updates** → **Add update** (give any one ATC detail).

Referrals

- Raise**: Referrals tab → **Add Referral** → Refer to, Response due (always set it), notes → **Send referral**. Needs **Edit**.
- Grants the committee **view**, plus **edit while the referral is open**, and keeps **view** after it closes. It grants **no** right to move the record on.
- Answer: Respond** → response document link + notes → **Record response**. The linked committee may answer; otherwise an editor, on its behalf.
- Withdraw**: the person who raised it. Reminders go out at **24 h** and **1 h**; unanswered referrals expire.

Documents (SharePoint)

- Attach**: Attachments tab → **Add attachment** → browse *Sites you are a member of* → **Attach** an existing file, or choose a file + **Attachment type** → **Upload & attach**. Needs **Edit**.
- Open**: select the document name. Never copy or email the resolved address — it expires in about an hour. Share the *record* instead.
- Versions** shows the history with a **Download** per version. Same name into the same folder = a **new version**, not a second document.
- Detach** removes the link only; the file stays in SharePoint. Activity is recorded on the record.

Notes — two kinds

- The record's **Notes field** — free text captured on the create/edit form and shown as *Notes on the record*.
- The **note log** — dated entries on the **Notes** tab (**Add Note**; needs Edit).
- A note may be changed or deleted **only by its author**, and only while they may still edit the record. Add a correcting note instead.

Reports & exports

- Reports** → **Report builder**: filter by report type, search, priority, sort, workflow type, state, owner, group, period or explicit dates, overdue / due soon / unassigned.
- A report — and its export, print or share — shows **only records you may open**. Never more.
- Exports: **Excel (.xlsx)** · **PDF (.pdf)** · **Web page (.html)** · **Comma-separated (.csv)**. **CSV is the register only**; the others always carry summary, breakdowns, register, activity and referrals, whichever report type you picked.
- One instrument as a formal document: the record's **Document** menu.

Share: link + expiry, optional repeat and email. The recipient **must sign in** and sees **your** figures. It is fixed once created, and **only an administrator can revoke it**. A share dies if its creator's account is removed.

Alerts

- Bell = unread count and the 5 newest. **View all alerts** lists the newest 25; **Mark all read** clears every unread, not just those 25.
- Opening an alert marks it read; **viewing the page marks nothing**.
- Raised on: record created · record moved on · referral raised, answered, recalled, expired or due.
- The person who acted is never alerted, and nobody who cannot view the record is ever told about it.

Escalate when...

- New Report / Resolution / Agreement refuses you** — ask your administrator for the creating role.
- A record is missing from your register** — ask for access, or for a referral to your committee.
- The Status menu is missing** or the move you expect is absent — confirm your move-on right, then check the **Diagram** tab.
- A transition is blocked** — read the warning box; a report close normally needs the ATC update.
- Attachments show no SharePoint sites** — ask for the site to be enabled and your membership synced.
- No alert email arrives** — ask the administrator to check the mail service and the background worker.
- A share must be revoked** — only an administrator can; do not rely on the link meanwhile.
